David Kyle Named New Program Manager of Efficiency Maine Business Program

AUGUSTA, ME, June 2006 – The new Program Manager of the Efficiency Maine Business Program is looking forward to helping businesses increase profitability by using electricity more efficiently.

David Kyle of Norway, Maine, earned masters and doctorate degrees in mechanical engineering from Yale University following undergraduate studies at Trinity College in Hartford. As a research scientist for Oak Ridge National Laboratory in Tennessee, his research was directed at heat pumps as well as heat and moisture transfer in commercial buildings. Kyle developed air conditioners as a senior engineer for Carrier Corporation in Indianapolis and also worked as a project engineer with Energy Investment, Inc, a Boston-based energy services company developing energy management programs for large commercial and industrial facilities. Most recently, Kyle has been a math and physics instructor in Maine.

“My present goal is to provide continuity to the Efficiency Maine Business Program, and to build on the work started under the leadership of Linda Viens,” said Kyle. “The business program has yielded high energy savings benefits, and I want very much to help uphold its success and impact. Working with the Efficiency Maine team in my new position, I can have a direct, beneficial impact on Maine businesses – an opportunity which many jobs in engineering and technology do not allow. “
